2-Fiber Detachable Dual Link DVI module, DDFX-100

Description

Optical graphic extension module consists of transmitter module and receiver module, each of which has two (2) LC connectors and a 24-pins DVI-D plug. Users could decide extension length at their discretion by choosing the length of fiber-optic cables with LC ferrules at the ends. It offers two (2) graphic TMDS signals to be extensible up to the limits of modal bandwidth of selected multi-mode glass fiber(50/125 um or 62.5/125um).

The module has a capability to transmit up to WQXGA (2560x1600) at 60Hz or WQUXGA (3840x2400) at 33Hz graphic signals with 60Hz refresh rate using leading-edge OPTICIS fiber-optic component that transmits seven (7) data channels over two (2) multi-mode fibers. At such data bandwidth, this module can extend up to 1,640 feet (500 meters) much over the limits of copper wire extension, without any distribution amplifier or repeater.

The EDID in a display can be read and restored by just plugging it to the display. This self-EDID programming feature makes the installation of DDFX-100 more easy and flexible at any variable resolution display systems.

The modules are constituted of three parts as follows;

- One (1) transmitter converting electrical to optical signals, model name: DDFX-100-T
- One (1) receiver converting optical to electrical signals, model name: DDFX-100-R
- Two (2) AC Adaptors to 110V-240V with DC 5V 1A outlet

Features

- ◆ Extends all VESA resolution up to WQXGA (2560x1600) at 60Hz or WQUXGA (3840x2400) at 33Hz DVI data up to 500 meters (1,640ft) over two (2) multi-mode fibers
- ◆ Detachable feature with a duplex LC connector for each module
- ◆ Offers Self-EDID programming feature, detecting from a display and restoring to an EEPROM in the transmitter just by plugging to the display without any physical DDC connection
- ◆ The modules are compact enough to directly plug to graphic sources and displays by adopting DVI-plugs
- ◆ Includes two (2) +5V DC power adapters for the transmitter and receiver
- ◆ Certifications: FCC / CE, Class 1 Laser Eye Safety
- ◆ Data security with negligible RFI/EMI emissions and loss of video quality due to no copper conductor present

Applications

- ◆ Medical imaging system
- ◆ Video wall system
- ◆ Digital signage
- ◆ Military / Aerospace
- ◆ Broadcast
- ◆ Conference room / Education

Functions

- Self-EDID Function

The EDID in a display can be read and restored by just plugging it to the display. This Self-EDID programming feature makes the installation of DDFX-100-TR more easy and flexible at any variable resolution display systems.

- Power Protection Circuit Mode in Transmitter Module

The transmitter (Tx) module of DDFX-100-TR is designed for power protection circuit from conflict of power supply between the external AC/DC power adapter and your DVI source by #14 pin.

We strongly recommend to use external AC/DC adapter for Transmitter (Tx) for stable power supplying. In case of Receiver (Rx), power should be supplied by AC/DC adapter due to no internal power supplying from the displays.

- Signal Detect Mode in Receiver Module

It offers optical signal monitoring LED when optical input power is lower than as specified in a certain case, for instance, losing optical connectors.
